

Virtana CloudMonitor

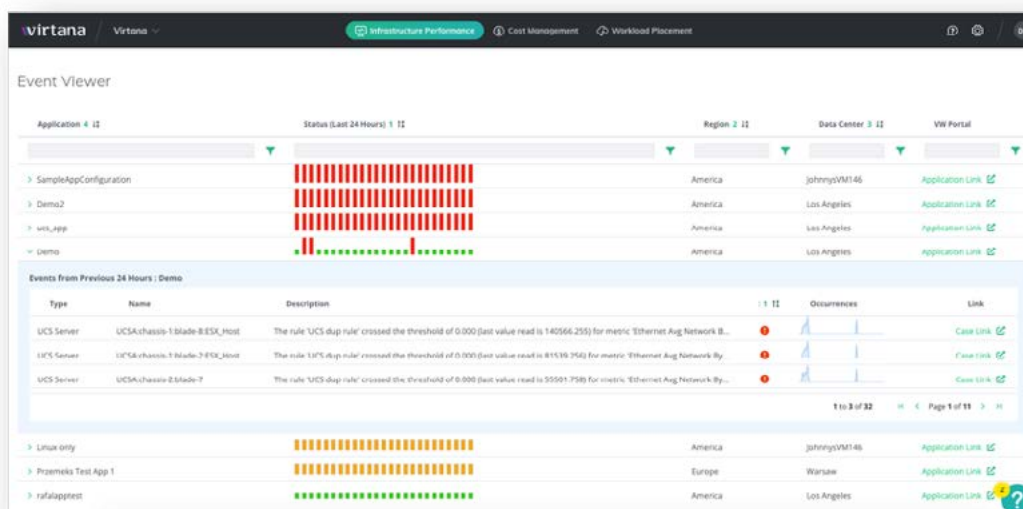

Reduce the complexity of monitoring and managing your hybrid IT environments across on-premises, colocation, and public cloud workloads.

You're busy managing a complex IT environment with multiple sites and multiple vendors, and you need a single view of everything that's happening within your infrastructure. Virtana CloudMonitor gives you an end-to-end, SaaS-based, global view of your hybrid infrastructure, enabling you to get the most out of your multi-vendor computing, networking, storage, cloud, virtual machines (VM), Hyperscalers, containers, databases, and more!

With CloudMonitor, you can stream data, including usage rates and alarm occurrences for applications, from multiple infrastructure types, eliminating individual data silos and simplifying how you monitor your hybrid environment.

With Virtana's unified CloudMonitor solution, you can:

- Detect which parts of your infrastructure support your mission-critical applications, thereby identifying your most critical infrastructure.
- Proactively plan for capacity needs and avoid overprovisioning hardware infrastructure by purchasing what you need, reducing infrastructure spend by approximately 15%.
- Provide centralized visibility and management of your entire on-premises infrastructure.
- Reduce mean-time-to-detect (MTTD) by an average of 95%, empowering your team to discover and correct anomalies before they become issues.
- Up-level alarm occurrence data for each application and components related to an application.
- Enable faster mean-time-to-resolution (MTTR) by an average of 90%, so critical applications can stay available for longer periods of time.

Accelerate Innovation

Make data accessibility challenges a thing of the past and give infrastructure teams the global visibility they need to ensure continuous availability, performance, and efficiency.

Improve Performance and Stay in Budget

Make data-driven decisions about infrastructure investments and ensure you have adequate capacity to support growth and performance without sacrificing IT budgets.

Eliminate Tool Sprawl

Simplify your multi-vendor management with a platform that allows you to implement a streamlined IT operational model and reduce the number of tools you use to manage your infrastructure.

Key Virtana CloudMonitor Features Include:

- **Global Visibility:** Centralized and panoramic view of your estates by any region, datacenter, or application.
- **SaaS Hosted:** Get unparalleled observability across on-premises and public clouds presented in Virtana's SaaS platform.
- **Historical Context:** Trailing 24 hours aligns with alarm cycles.
- **Failover Site Support:** When switching sites, quickly identify alert origins from your active or DR sites.
- **Component Drill Down:** See individual storage, network, and compute components' health and performance.
